WPC OR **BIO**COMPOSITE

The innovative combination of materials allowed us to achieve very good mechanical properties with a very high proportion of natural raw material, which is wood from an FSC-certified source. We reduced the amount of polymer by as much as 40% and replaced it with natural wood. The wood content in the products does not adversely affect the possibility of further recycling and reprocessing into another product.

WPC, or wood-polymer composite, is also very resistant to temperature, the products easily maintain their rigidity even when used at 95°C *.

Compatible with SUP directive

40% wood content

”

* Tests include the number of 125 cycles in the dishwasher
